## MAD LIBS

We will be creating a MadLib website. There will be 3 main stories to choose from (with blank spaces that the user will fill in), though details of the story will change with each new story created, since many of the details used to create the story will be coming from our APIs. The user will pick one of the three stories and be given a list of words to fill out (verb, noun, etc). Then they will submit this form and will see the story, with the user's inputs filling in the blanks.
